

Managed Services – DaaS

Our client, a national law firm of more than 250 attorneys with strong ties to the automotive, manufacturing, and pharmaceutical industries, decided to fully outsource its eDiscovery technology infrastructure and sunset its existing platforms and environment. After the client evaluated many competing proposals and performed several months of live “proof of concept” testing and comparisons, Compliance was selected to migrate more than 17 TBs of legacy data from various systems, including CaseLogistix, Concordance, and iPro, and set up a 2 TB “new data” DaaS environment that included processing in Nuix, analytics with Brainspace, and hosting through Relativity, which the client’s own internal team now manages, self-directs, and supports. In the three years since inception, that new data environment has grown 10 TBs.
