

Case Study: Internal Compliance Audit

In support of its information governance policies and to ensure regulatory compliance, our client engaged Compliance to assist with highly-sensitive internal reviews.

Client Challenge

A major US-based pharmaceutical client implemented a program of internal compliance controls that include random employee email selection and audits, not only for internal policies but also for federal and state regulatory compliance.

Compliance Solution

As the client's primary eDiscovery partner for litigation matters, Compliance was selected to assist with the collection, processing, hosting, and review of highly-sensitive internal reviews done on a quarterly basis, bringing a measure of consistency, time, and cost savings to the client for this important initiative.
