

Case Study: eDiscovery Technology Platform Outsourcing

To eliminate the burden of its eDiscovery technology infrastructure, a law firm turned to Compliance for an outsourced solution and self-directed experience for its attorneys.

Client Challenge

A national law firm of more than 250 attorneys with strong ties to the automotive, manufacturing, and pharmaceutical industries decided to fully outsource its eDiscovery technology infrastructure and sunset its existing platforms and environment.

Compliance Solution

Following evaluation of proposals and several months of live “proof of concept” testing and comparisons, Compliance was selected to migrate more than 17 TBs of legacy data from various systems, including CaseLogistix, Concordance, and iPro.

We set up a 2 TB “new data” environment on our platform that included processing in Nuix, analytics with Brainspace, and hosting through Relativity, which the client’s own internal team now manages, self-directs, and supports.

In the three years since inception, that new data environment has grown to 10 TBs.
